

In the Running for Another DoD Contract

On Friday May 13th, WiGL was formally notified by the Air Force (AF) that we have been **nominated** for an additional \$20M per year procurement contract.

Details are still fuzzy, and there are no guarantees WiGL will win the nomination or follow-on procurement contract, but we are working hard to determine COTS partners. Team WiGL has started to build the work plan to get touchless Wireless Power Transfer (tWPT) WiGL enabled offerings to more and more AF bases.

What a GREAT 2022!

[Guinn Partners Update:](#)

WiGL is also happy to report that we have seen more breakthroughs with our partners working to utilize our mesh network and B2B commercial off the shelf (COTS) hardware!

Guinn Partners, is currently partnering with PowerCast to analyze their wireless power hardware on a WiGL-enabled network. Guinn and PowerCast are characterizing various configurations using PowerCast COTS evaluation kits. This networking process is only the beginning, as we work through Milestone testing employing nearly two-dozen PowerCast transmitters. These tests are different from other WiGL-enabled COTS demonstrations and will provide more finite data contributing to further advancements for Adhoc networking.

Milestone A test is ongoing, and we are hopeful that they will be concluded around mid-May/June 2022, leading to an exciting summer full of more updates!

The knowledge that we can absorb from these tests regarding Milestone A will form a critical foundation that WiGL's ability to power devices on the move using COTS (WiGL-enabled). Together, Guinn, PowerCast and WiGL are working to securely build upon and expand realization of our patented mesh network technologies. Using PowerCast's FCC approved hardware provide leaps in the right direction and will only lead to more expansive developments for the AF and commercial markets.

Thank you for your continued support, and we hope to provide you with more updates soon!
