

Another WiGL-enabled Product

WiGL is proud to announce that we have entered into another tentative products agreement. This time with Project Overlord, specifically to work with their latest endeavor, RimTech. WiGL believes that a vehicle-based Internet of Things (IoT) technology like RimTech demonstrates a solution that coincides perfectly with our vision of future Smart Cities populated by touchless Wireless Power Transfer (tWPT) networks. Additionally, an agreement between our companies could deliver amazing vehicle based IoT solutions for consumers everywhere.

WiGL's patented wireless networks allow for all forms of battery powered tech to partner and move towards the future of 21st century wireless power. WiGL is excited to include RimTech in our vision of wirelessly powered devices and believes the benefits of this partnership...could be limitless. In addition to getting RimTech involved in our Smart Cities initiative(s), WiGL also sees the benefits of including tWPT technologies in Electrical Vehicles (EV).

A marriage between WiGL + IoT devices + EVs that can recharge and/or power RimTech devices could allow for:

1. unlimited wireless power that moves with you
2. greater battery life through wireless recharging
3. the ability to track and trace vehicles in real-time (helping to fight crime)

WiGL's vision for the future, to create smart tWPT networks using all forms of commercial off the shelf (COTS) hardware, has not changed. Partnering with RimTech creates another COTS avenue of necessity for consumers, auto-dealers, and insurance companies. The wireless charging market offers \$25 billion in possibilities and deals like this only help to broaden the horizons of WiGL-enabled COTS products.

We are very excited about what the future has in store for wireless power products and cannot wait to see how both companies thrive from this strategic relationship!
